Dear Colleagues,

Over recent years, the management of both prostate cancer and urothelial cancers has significantly advanced, incorporating multidisciplinary strategies. Concurrently, researchers are actively conducting clinical trials to investigate the potential of targeted therapies, immunotherapies, and novel combinations of treatments across various forms of these malignancies. As a result, the landscape of urological cancer management is witnessing remarkable progress, offering new hope and improved outcomes for patients.

The ICE-GU is a specialized program designed to equip postgraduate students pursuing and interested in genitourinary cancers an in-depth understanding of prostate cancer and urothelial cancer management. Delivered in four well-structured virtual modules with real-world case discussions, this program will cover the basics to advanced concepts related to the etiology, diagnosis, treatment, and future directions of these two prevalent urological malignancies.

Module 1:

Deciphering Prostate Cancer: Understanding the Disease Spectrum and Approaches to its Treatment

Module 2:

Exploring Treatment Choices in Advanced Prostate Cancer & Emerging Horizons

Module 3:

Unravelling the Landscape of Urothelial Cancer and Approaches to Treating Non-Muscle Invasive Bladder Cancer

Module 4:

Navigating the Treatment Maze for Advanced Urothelial Cancer & Future Directions

Overall, this education program aims to cultivate a strong foundation of knowledge in the field of Genitourinary Cancers, enabling students to contribute effectively to the management of prostate and urothelial cancer in the future.

Participation certificate to all the delegates will be given!
